

## Med Tech Training Pioneer Opens New International Headquarters

*College of Health Care Professions' MTMI partners with Nautilus Medical Technologies to power faster, more secure sharing of medical imaging*

**MILWAUKEE, July 30, 2020** – The Medical Technology Management Institute (MTMI), a division of The College of Health Care Professions, today announced a partnership with Nautilus Medical Technologies, developer of a cloud-based imaging sharing platform used by over a thousand healthcare providers nationwide. Through a series of new training programs, thousands of healthcare practitioners will learn the skills to utilize Nautilus' MatrixRay and TeleRay image exchange and transmission applications, which have become increasingly critical platforms as the field of medical imaging continues to advance.

"As the pace of innovation in radiology continues to accelerate, it is imperative that practitioners have access to training in emerging technologies that can improve their ability to deliver high-quality patient care," said Dr. Ernie Cerdena, president, MTMI. "Nautilus helps medical professionals facilitate efficient, secure, and low-cost image exchanges, delivering high-quality, affordable images to patients. We are proud to be able to offer our students access to these critical programs that are changing the way the healthcare field stores and shares medical images."

Radiology and medical imaging have continued to expand rapidly in recent years, already over a \$25 billion industry with an expected 23,400 additional radiologic and MRI technologist jobs by the year 2028. Nautilus' technologies are designed to increase the portability and accessibility of medical imaging studies, saving medical providers thousands of dollars on traditional CD burning equipment.

"As hospitals and imaging labs continue to expand cloud-based ultrasound services, we must help healthcare workers access the tools and training needed to deploy the benefits of the new technology," said Tim Kelley, CEO of Nautilus Medical Technologies. "Through this partnership we can help frontline workers learn the skill-sets they need to make medical imaging sharing more secure while saving time and money that can be used for care."

**About MTMI:** Medical Technology Management Institute (MTMI Global) has been dedicated to improving patient care since 1989, as a trusted global medical imaging education partner. MTMI Global provides high quality accredited continuing education and training for medical imaging professionals with a focus on programs for technologists, medical physicists and physicians. Programs are taught by experts with national reputations in their field including: Radiography, mammography, computed tomography, magnetic resonance imaging, bone densitometry, ultrasound, PACS/imaging informatics, nuclear medicine and fluoroscopy. MTMI Global delivers outstanding accredited multimodality continuing education and cross training experiences in webinar, face to face/classroom and on-demand formats that provide practical and effective training opportunities. MTMI global is a continuing education division of The College of Health Care Professions (CHCP). For more information, visit [www.mtmi.net](http://www.mtmi.net)

**About Nautilus Medical:** Nautilus Medical is an industry leader in the field of radiology for the management and distribution of medical images and patient information. Nautilus is widely recognized as the most reliable and advanced software on the market. With more than 3000 users, and 33 of the top 50 medical centers including Cleveland Clinic, Cedars-Sinai, Harvard, Cornell, Northwestern, UPMC, UPENN, NY Presbyterian, Columbia, Cornell, Shriners and many more. Nautilus has been growing overseas and can be found in more than 20 countries. Recently Nautilus has partnered with Neurologica, a subsidiary of Samsung to grow solutions in radiology.
